Effortlessly manage and inventory your movable assets

Simply Asset & INVENTORY

The Fixed Asset management and inventory tool is the easiest and most efficient on the market

 Available in SAAS mode or as a License

A solution developed by PCI, your movable asset management specialist for over 19 years.
Over **700 customers** worldwide

SIMPLY INVENTORY: A SIMPLE, AFFORDABLE AND MODULAR TOOL

Our solution is designed to manage and inventory your company's diverse movable assets and equipment. Easy to implement, it boosts your service productivity and reduces costs.

■ ASSET MANAGEMENT

Identify and monitor your assets and equipment

- Customize your data:
 - . types of equipment (office furniture, IT equipment, telephony, vehicles, workshop tools...)
 - . Components (format, color, condition)
 - . Date (acquisition, validity)
 - . Status (in stock, in service, out of service, on loan...)
- Location by company, sites, offices...
- Allocation to departments and users
- History and traceability of all movable assets
- Manage costs and residual values (fixed assets, depreciation)
- Monitor contracts and warranties

■ PERFORM INVENTORY WITH BARCODES OR RFID

Simple and easy labeling

Choice of label types according to budget and asset identification requirements

- Labels of your choice according to your budget or requirements for each asset
- Scan with professional, sturdy terminals or any Android device equipped with a barcode or RFID reader
- Physical inventory of your assets (initial or control inventory)
- Automatically synchronize data from the Asset management database to the PDA (and vice-versa)
- Automatic data updates
- Detects changes between two inventory sessions
- Add photos of inventoried assets

■ FIXED ASSET RECONCILIATION

Optimal asset management guaranteed

Once the physical inventory is complete, the software lets you list the movable assets and then reconcile with fixed assets.

This feature then enables you to export the equipment no longer used (scrapped, sold) in order to be removed from fixed assets.

SIMPLY INVENTORY BENEFITS

Fast Deployment and Automated Management

Importing your files in CSV format allows you to identify users and determine computing equipment. It is linked to the Inventory module, enabling you to automatically create and update your assets.

Customizable management for all types of assets

The link with the barcode inventory (or manual entry), enables you to create, manage and classify your equipment (company, site, department, type of equipment). The equipment master record enables you to manage technical and financial information.

Asset identification with labeling

You can label your assets using barcodes or RFID. Your asset management database is then automatically updated thanks to a powerful and efficient method and tools.

Access your asset and equipment data in real time.

Automatic synchronization of your computing equipment

A simple button allows you to automatically synchronize data from the Asset management database to the PDA to perform the inventory. Once the inventory is complete, the data is transferred from the PDA to the Asset management database. As a result, it is straightforward to inventory, move your assets, or create new ones.

Initial and control inventory

Fast and easy, the initial physical inventory makes it possible to generate an accurate and complete dashboard (allocation change, creation, deletion) and control your assets throughout their life cycle.

Relevant statistic reports

The software's graphical indicators are accurate and precise, giving you relevant information on the configuration, location and value of your movable assets.
